DETAILED ACTION

Allowable Subject Matter

2. Claims 2-5 allowed.
3. Claims 15-23 and 25 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 24 rejected under 35 U.S.C. 112, second paragraph, as being indefinite in that it fails to point out what is included or excluded by the claim language. Specifically, this claim depends on a cancelled claim 1.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 14 rejected under 35 U.S.C. 103(a) as being unpatentable over Aoki et al. (4,760,389) in view of JP 4-299571.

Art Unit: 2826

Regarding Claim 14, Aoki et al. disclose a transmitting type display device where in Fig. 2 and Claim 1, it's disclosed a thin film transistor device with source/drain regions/electrode, gate electrode, amorphous semiconductor layer and protective/passivation layer. Aoki et al. fail to disclose the required fixed charges prevention structure between the semiconductor layer and protective/passivation layer. However, JP 4-299571 discloses an amorphous silicon thin film transistor for color liquid crystal display where the required fixed charges prevention configuration between the protective/passivation layer and the semiconductor layer.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required fixed charges prevention structure in Aoki et al. as taught by JP 4-299571 in order to have a liquid crystal display device with better reliability.
